

Tom Postma Bio

Tom is originally an automotive engineer with a strong technical understanding of water networks and a high level of expertise in water loss management. He is the owner of Technimex International BV, having worked full-time in the company for 28 years.

His company is actively involved in decreasing Non Revenue Water. The process starts from leak detection till real-time pressure management. In addition, Tom is developing new low energy consumption pumping stations that deliver water based on real time consumption.

Tom's company Technimex is acting globally and recently has established a foothold in Asia with Dutch Flow Technology PTE LTD, registered in Singapore to provide an even better support to Asia.

Tom is using most common software, satellite images and hardware to efficiently find the leaking spots in the water network. Based on the size and number of leaks Tom and his specialist team propose a plan to the water utility how to reduce the water leakage without the need to replace pipes by using cutting edge technology.
